

PRE-CONDITIONED AIR CONNECTOR

▶ The ultimate PCA connector. Built with input from the airline industry, this connector saves you time and money with a functional and rugged design.

A SNAP-IN REPLACEABLE GASKET

No need to remove the connector from service when the gasket gets worn, simply SNAP-IN a new durable gasket. No caustic glue, scrapping, or cure time. You're back up and running in minutes!

B SUPERIOR AIR FLOW AND PROTECTIVE SCREEN

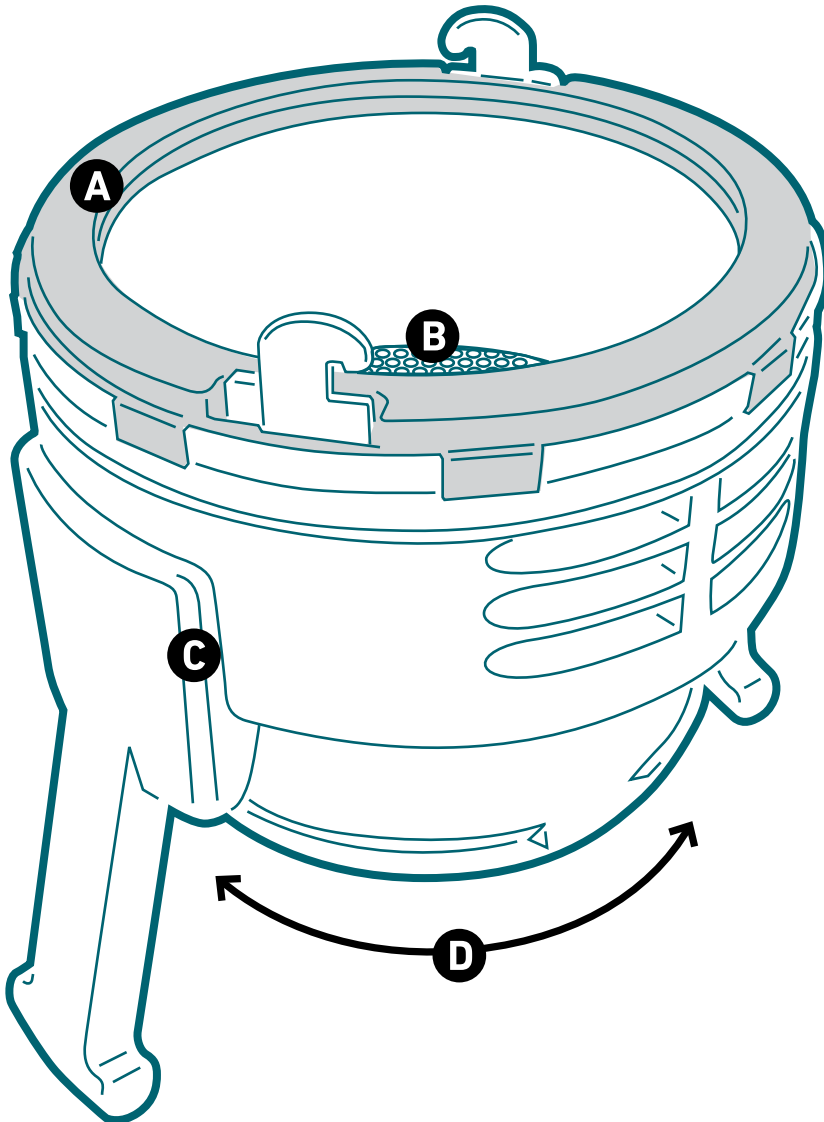

Provides the largest internal diameter of any connector, maximizing air flow into the aircraft. No internal nuts or bolts to obstruct air flow. The built in "high flow" F.O.D. screen prevents debris from entering the aircraft.

C YEARS OF RELIABLE SERVICE

Built of high impact UV resistant nylon, this innovative modular design is resistant to fuels and chemicals and made to last.

D INTEGRAL SPINNING PCA HOSE CONNECTION

Eliminates those bulky "bolt-on" swivel adaptors along with the added hardware. Made of high impact UV resistant material, the rotating ring connection eliminates twists and maximizes airflow. The extended ring provides a greater connecting surface for attaching your PCA duct.
