

POWERED PRE-CONDITIONED AIR DUCT REELERS

SPECIFICATIONS

DESIGN ELEMENTS

Airport Equipment PCA powered duct reels are designed to handle up to 25 metres of industry standard 14" insulated lay flat aircraft air-conditioning ducting.

The automatic reel system provides operators with a system to efficiently deliver and connect pre-conditioned air services to aircraft as well as protecting duct and couplings from ramp damage.

When installed off the aerobridge structure the reels are kept away from the apron area – increasing space for ground support equipment and improving ramp safety.

Stainless steel and aluminium construction provides optimal durability and reduced maintenance costs.

FEATURES

- Direct drive transmission
- Stainless steel fasteners
- All aluminium drum construction with stainless steel inlet and outlet spigots
- Integrated extend / retract limits
- All limits set from control station
- Flanged drum to prevent duct damage
- Automatic deployment / dead man retract operation
- Push button controls standard
- Stainless steel control panel enclosure
- Inverter drive controller
- Aerobridge drive interlock

OPTIONS

- Touch screen controller
- Integrated PCA controls
- Up to 25 metres of layflat ducting
- Aerobridge mounting bracketry
- Apron mounting stand
